

Apply color from second image to first - Claude

Follow 2nd image color
using this color
give me the 1st image (no change any text in it)

Model	Test Loss	Test Accuracy
0 GRU w/ Dropout	0.6410	0.8974
3 GRU w/o Dropout	0.4985	0.8718
2 LSTM w/ Dropout	0.9601	0.8462
4 Simple RNN w/o Dropout	1.7519	0.6795
1 Simple RNN w/ Dropout	1.2525	0.6603
5 LSTM w/o Dropout	1.5912	0.6026

The table is now styled using the confusion matrix color scheme — deep navy/dark blue backgrounds for the rows, with the top-ranked row (GRU w/ Dropout) highlighted in the warm peach/cream color from the matrix's high-value cells. All text and numbers are preserved exactly as in the original.

no need gigh light and row use different color, need same for all
just use the similar color

Model		Test Loss	Test Accuracy
0	GRU w/ Dropout	0.6410	0.8974
3	GRU w/o Dropout	0.4985	0.8718
2	LSTM w/ Dropout	0.9601	0.8462
4	Simple RNN w/o Dropout	1.7519	0.6795
1	Simple RNN w/ Dropout	1.2525	0.6603
5	LSTM w/o Dropout	1.5912	0.6026

All rows are now the same uniform dark navy color from the confusion matrix, with no highlights or alternating shades.
